Contents

Preface

Contrasts between biologically-based process models and management-oriented growth and yield models
G.M.J. Mohren, (Wageningen, Netherlands) and H.E. Burkhart (Blacksburg, VA USA) 1

Biologically-based process models

An approach to developing process-oriented growth and yield models
R.L. Amateis (Blacksburg, VA, USA) 7

A process-based growth model for young red pine
Y. Zhang, D.D. Reed, P.J. Cattelino, M.R. Gale, E.A. Jones, H.O. Liechty and G.D. Mroz (Houghton, MI, USA) 21

Pipe-model theory of stem-profile development
K. Rennolls (London, UK) 41

Modelling daily growth and nitrogen turnover for a short-rotation forest over several years
H. Eckersten (Uppsala, Sweden) 57

Modelling stocks and flows of carbon and nitrogen in a planted eucalypt stand
H. Schäfer and H. Krieger (Kassel, Germany) 73

MIOMBO — a vegetation dynamics model for the miombo woodlands of Zambezian Africa
P.V. Desanker (Houghton, MI, USA) and I.C. Prentice (Uppsala, Sweden) 87

A fractal-based *Populus* canopy structure model for the calculation of light interception
S.G. Chen, R. Ceulemans and I. Impens (Wilrijk-Antwerp, Belgium) 97

Light penetration through structurally complex forest canopies: an example of a lowland tropical rainforest
H. Koop and F.J. Sterck (Wageningen, Netherlands) 111

Simulation of multi-species tropical forest dynamics using a vertically and horizontally structured model
H. Bossel and H. Krieger (Kassel, Germany) 123

Fitting process-based models with stand growth data: problems and experiences
R. Sievänen (Helsinki, Finland) and T.E. Burk (St. Paul, MN, USA) 145

An uncertainty analysis of the process-based growth model FORGRO
H. Van der Voet and G.M.J. Mohren (Wageningen, Netherlands) 157

Competition models

Classifying the life-history strategies of trees on the basis of the Grimian model
B. Brzeziecki and F. Kienast (Birmensdorf, Switzerland) 167

Modeling crown rise in even-aged stands of Sitka spruce or loblolly pine
H.T. Valentine (Durham, NH, USA), A.R. Ludlow (Farnham, UK) and G.M. Furnival (New Haven, CT, USA) 189

An empirical evaluation of a three-dimensional crown model for predicting volume growth
W.R. Smith (New Orleans, LA, USA) 199

Intraspecific competition in irrigated and fertilized eucalypt plantations
M. Tomé, J.A. Tomé (Lisboa, Portugal), M.C. Araújo (Obidos, Portugal) and J.S. Pereira (Lisboa, Portugal) 211

Hypotheses about competition for light and water in even-aged common beech (*Fagus silvatica* L.)
J.F. Dhôte (Nancy, France) 219

Management-oriented growth models

Linking individual-tree and stand-level growth models
G.L. Somers and S.K. Nepal (Auburn, AL, USA) 233

Adaptable stand dynamics model integrating site-specific growth for innovative silvicultural prescriptions
D.R. Larsen (Seattle, WA, USA) 245

A yield prediction model for pure and mixed stands
G. Wenk (Dresden, Germany) 259

Evaluating forest stress factors using various forest growth modeling approaches
P.V. Desanker, D.D. Reed and E.A. Jones (Houghton, MI, USA) 269

Predicting effects of defoliation on spruce–fir stand development: a management-oriented growth and yield model
J.R. Steinman (Edmundston, N.B., Canada) and D.A. MacLean (Fredericton, N.B., Canada) 283

Sustainable timber harvesting: simulation studies in the tropical rainforests of north Queensland
J.K. Vanclay (Frederiksberg, Denmark) 299

HOPSY, a model to support strategic decision making in forest resource management
P.J.W. Hinssen (Wageningen, Netherlands) 321

Development of growth models for *Pinus radiata* in New Zealand — experience with management and process models
C.J. Goulding (Rotorua, New Zealand) 331
